

Portfolio Manager Commentary and Performance

Market Update

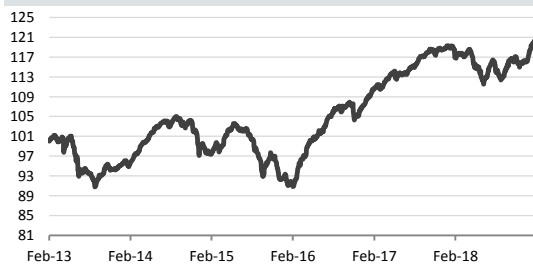

In January, the Fund returned 3.61%.

In Latam, the asset class performance was positive explained by exogenous reasons to the Region. The expectations that the FED would raise the rate less to what was said in December and the absence of news about the trade war after the agreed temporary truce. These factors generated a "risk on" in the region by international investors.

In the Latam bond markets, companies have continued to execute tender on his debt in order to reduce it or to do liability management. In Brazil there are high expectations about the pension reform that will be presented by the government.

We expect that the exogenous events in the Region continue to create volatility in the market, but in a scenario where the prospects of Latam companies follow the positive responses regarding the reduction of indebtedness.

Performance

(1) Performance is net of fees. SICAV Series I performance is shown as of January 1, 2015; prior to that, the performance shown is that of the Chilean-domiciled Series D, which has an identical strategy. Fees can be up to 1.15% on an annual basis.
